

Aythami Melián Perdomo

Secure Software Architect specializing in IAM and AI-Driven Development

Senior PHP Backend Developer | PHP Architect | Secure Software Engineer (SSDLC)

Remote from Gran Canaria, Spain | ajmelper@gmail.com | +34 679 302 443

LinkedIn: <https://www.linkedin.com/in/aythami-melian/>

GitHub: <https://github.com/ajmelian>

Professional Summary

Senior PHP Backend Developer and Software Architect with 20+ years of experience building and modernizing B2B platforms, SaaS products, and REST APIs using PHP, Laravel, CodeIgniter, and MySQL. Combines hands-on development with secure architecture, applying SOLID principles, Hexagonal Architecture, automated testing, and CI/CD to deliver reliable, maintainable software across enterprise, healthcare, and public-sector environments.

Experienced in agentic software engineering, using Spec-Driven Development (SDD), Test-Driven Development (TDD), and OpenSpec to connect requirements, acceptance criteria, tests, and implementation. Integrates AI coding agents into analysis, development, refactoring, and review workflows, supported by engineering oversight and quality controls. Additional experience includes Java 21, Spring Boot, and identity and access management with Okta, Microsoft Entra ID, and Open Policy Agent.

Brings a practical approach to legacy modernization, application security, and technical problem-solving, alongside a collaborative mindset, ownership, and a commitment to mentoring and continuous learning.

Core Skills

PHP 8.x · Laravel · CodeIgniter 3/4 · Shield · Symfony · REST APIs · Backend Services · MySQL/MariaDB · Legacy Modernization · Hexagonal Architecture · SOLID · Clean Code · Design Patterns · DDD Concepts · Agentic Software Engineering · Spec-Driven Development (SDD) · Test-Driven Development (TDD) · OpenSpec · OpenAI Codex · Claude Code · OpenCode · Java 21 · Spring Boot · IAM · Microsoft Entra ID · Okta · Open Policy Agent (OPA) · MFA · OWASP Secure Coding · Secure SDLC · DevSecOps · PHPUnit · PHPUnit · JSUnit · Unit, Integration & Functional Testing · SonarQube · Static Analysis · Code Reviews · Git · GitHub · GitLab CI/CD · Docker · Linux · Bash · Python · Agile/Scrum · JavaScript (ES6+) · HTML5/CSS3 · React & Angular (Support Level)

Soft Skills

Clear Technical Communication · Cross-functional Collaboration · Stakeholder Engagement · Ownership & Accountability · Technical Leadership · Mentoring & Knowledge Sharing · Analytical & Critical Thinking · Proactive Problem-solving · Root Cause Analysis · Pragmatic Decision-making · Quality & Security Mindset · Adaptability & Resilience · Continuous Learning & Improvement

Professional Experience

Secure Software Architect specializing in IAM and AI-Driven Development

IndraMind Cybersecurity · Spain – *From 2026*

Senior Architect specializing in software engineering with AI agents, architecture design, and application modernization. I work with Spec-Driven Development and Test-Driven Development methodologies, using OpenSpec to define requirements, technical specifications, acceptance criteria, tests, and implementation plans before development begins.

I design and oversee backend solutions, APIs, and enterprise integrations using Java 21, Spring Boot, PHP 8.4, CodeIgniter 4, Shield, and Laravel. I participate in identity, authentication, and authorization projects using Okta, Open Policy Agent, Google Authenticator, and Microsoft Authenticator, implementing MFA and access policies.

I integrate models and agents such as DeepSeek, Qwen, OpenAI Codex, and Anthropic Claude Code into processes for analysis, test generation, implementation, review, refactoring, and documentation. I use Visual Studio Code and OpenCode to incorporate these workflows into the development cycle.

I apply quality and security controls using SonarQube, linters, PHPUnit, JSUnit, and static analysis, integrated into CI/CD pipelines. I manage repositories and versioning strategies with Git, GitHub, and GitLab, as well as Docker and Ubuntu Linux environments.

I also perform automation, administration, and diagnostics using Bash, Python, SSH, and SOCKS5 proxies. My approach combines software architecture, DevSecOps, continuous quality, technical traceability, and AI-assisted engineering to build maintainable, secure, and scalable solutions.

Tech stack: Java 21 · PHP 8.4 · Python · Bash · Spring Boot · API Rest · GitLab · GitHub · Git · OPA · Microsoft Entra ID · Okta · Docker · OpenSpec · SDD · TDD

Freelance – Senior PHP Backend Developer / Architect (Founder)

CodeSecure Forge – Gran Canaria, Spain – *From 2014*

Delivered backend and API development for secure, scalable PHP applications in regulated and enterprise environments.

Key Contributions aligned to the role:

- Designed and implemented backend services and API layers in PHP (**Laravel / CodeIgniter**) with emphasis on **clean, testable code** and maintainable architecture.
- Led gradual modernization of **legacy PHP systems**, improving structure, reliability, and scalability while minimizing downtime and risk.
- Built **MySQL schemas**, optimized queries, and improved data integrity for high-volume transactional systems.
- Implemented **CI/CD pipelines (GitLab)** with quality gates (SonarQube), ensuring consistent delivery and code quality.
- Conducted architecture reviews and enabled teams through code reviews and mentoring to enforce **SOLID/Clean Code standards**.
- Developed security-first engineering practices (SSDLC) as an **added value**, reducing defect rates and preventing regressions.

Clients: Izertis, Diputación de Barcelona, Principado de Asturias, Factech Consulting, Atos Origins, Universidad de La Laguna, Wallner Group.

Tech stack: PHP 8.x · Laravel / CodeIgniter · REST APIs · MySQL · Git · GitLab CI/CD · Docker · SonarQube · Snyk · Linux · OWASP Secure Coding · integration tests (ad hoc) · Jira · Moodle · Redmine

Senior PHP Developer / Application Security Lead

Lazarus Technology – Spain – *2018–2024*

Led backend development and application security strategy for enterprise-level platforms. Collaborated with cross-functional teams to ensure compliance with European data protection standards.

Key Contributions:

- Developed core backend modules and services for enterprise B2B platforms, collaborating with cross-functional teams.
- Introduced **automated code quality** with SonarQube and strengthened CI/CD delivery practices.

- Supported incident response and root-cause analysis for production issues, proposing long-term fixes.
- Established secure coding and engineering guidelines and delivered internal enablement sessions.

Tech stack: PHP 7.x / 8.x · CodeIgniter (if applicable) · REST APIs · MySQL · Git · GitLab CI/CD · SonarQube · Linux · OWASP · Incident handling · Secure SDLC · Moodle · Redmine

T Analyst & Online Software Engineer (Healthcare)

Atos | Las Palmas de Gran Canaria | 2014 – 2018

C.H.U.I.M.I. (Public Healthcare) | On-site

Worked on high-performance, mission-critical web applications for a **highly regulated public healthcare environment** (4th level LOPD), helping modernize the organization's digital capabilities and ensuring service continuity and data integrity.

Key contributions:

- Gathered functional and technical requirements with **stakeholders and clinical teams**, translating business needs into reliable backend solutions.
- Designed and developed critical **web applications in PHP 5.4 and PHP 7.x**, ensuring maintainability and long-term scalability.
- Implemented robust data handling strategies with **distributed databases**, optimizing performance and ensuring high availability.
- Contributed to integrity and traceability mechanisms inspired by **blockchain-style auditability** (immutable event tracking / provenance), improving trust and compliance.
- Participated in iterative delivery cycles, collaborating closely with multidisciplinary teams to continuously improve platform quality.

Tech stack: PHP 5.4 / 7.x · MySQL · Linux · Distributed data systems · High-availability environments · Secure development practices · Redmine

Senior PHP Developer (eLearning / Public Sector)

IECISA (now INETUM) | Full-time | 2005 – 2013

Las Palmas de Gran Canaria, Spain | On-site

Developed and maintained large-scale eLearning systems supporting the **continuous training of public school and high school teachers** for the Canary Islands and Asturias regional governments, built on **Moodle LMS**, managing end-to-end training lifecycle workflows.

Key contributions:

- Designed and developed backend modules for Moodle-based platforms, enabling scalable management of training programs and administrative processes.
- Implemented key business workflows covering the full training lifecycle: **enrollment requests, merit-based access, course completion, certification issuance, and HR notifications** impacting professional salary review.
- Built and optimized database-driven features to support high user volumes and reliable reporting.
- Maintained and improved legacy PHP systems through refactoring and enhancement, ensuring platform stability over long service periods.
- Coordinated with functional teams and public administration stakeholders to ensure requirements accuracy and compliance with institutional standards.

Tech stack: PHP · Moodle LMS · MySQL · Linux · Enterprise eLearning platforms · Public Administration processes

Certifications

Zend / Perforce

- Zend Certified PHP Engineer (ZCPE) — In Progress (Self-study)
- Cisco AI Technical Practitioner (810- 110 AITECH)

APIsec University (Oct 2024)

- API Authentication
- API Security Fundamentals
- OWASP API Security Top 10

Scrum.org

- Professional Scrum Developer™ I (PSD I) – Oct 2024

LinkedIn Learning (Jun-Jul 2024)

- PHP: Creating Secure Websites
- MVC Frameworks for PHP
- Software Architecture Foundations
- Continuous Integration with GitLab
- Generative AI for Cyber Range
- Leadership in Software Projects

(+40 additional certifications covering Git, Agile, DevOps, AI, and secure coding)

Publications & Open Knowledge

Book: "Manual práctico de Seguridad en PHP 8.x: Protegiendo Aplicaciones Web Contra Amenazas"

Amazon Kindle: <https://www.amazon.es/dp/B0D2C3CXM9>

Research Papers & Articles: Published technical papers on secure development practices, available at:

GitHub Papers: <https://github.com/ajmelian/papers>

Open Source Contributions: Maintains libraries and projects on secure coding in PHP, API hardening, and document workflows:

GitHub Profile: <https://github.com/ajmelian>

Languages

Spanish (Native), English (B2 - professional working proficiency)

Target Roles & Availability

Open to full-time **remote** roles in:

- Senior PHP Backend Developer
- PHP Architect / Backend Lead
- Secure SDLC / DevSecOps (value-add)

Remote only | Immediate incorporation
